ABOUT US

Setting new standards in agronomy

We provide you with independent agronomy, environmental, digital, business and nutritional advice. Equipping your farm with the tools and knowledge for sustainable success.

60+
agronomists
specialising in a wide
range of crop types

FOUNDED IN
1999

Advice to over
300,000
hectares of the
UK's farmed area

OUR ETHOS

Expertise

Trained to the highest standards in crop production and environmental compliance.

Tailored advice

Local knowledge and experiences keeping your farm successful and profitable.

Trusted relationships

Long-term partnerships based on mutual understanding and trust.

Technical support

In-house technical and IT teams that ensure our advice is topical alongside the latest legislation.

AGRONOMY & ADVICE

ADVANCED AGRONOMY

Services tailored to your farm

- Technical advice supported by trials and independent research
- Supporting integrated farm management practices
- Guidance on end market and retail protocol requirements
- Specialist services including analytical and laboratory
- Tailored, practical environmental advice
- Unrivalled farm management systems
- Specialist seed and fertiliser advice for efficient and profitable farming

Our agronomists have BASIS, FACTS and additional specialist qualifications.

Arable

All broad-acre arable crops including cereals, oilseed rape and pulses.

Vegetable

Alliums, brassicas, root crops, herbs, salads and specialist crops including pumpkins and asparagus.

Forage

All forage crops including grassland, maize and wholecrop.

AGRONOMY & ADVICE

ALLIUM & BRASSICA CENTRE

We provide you with specialist advice on all aspects of allium and brassica production and storage

- Bespoke agronomy with full compliance and traceability for end markets
- Strategic and practical advice on store construction and design
- Backed by ORETO accredited independent trials

OUR LEADING SERVICES

You have a question, we have the answer...

Our services support the agronomy advice at the core of your business. We provide solutions through our unrivalled advice, services and people.

Translating data into knowledge

Omnia is the next generation farm management software that can help you transform your business, save time and maximise efficiency.

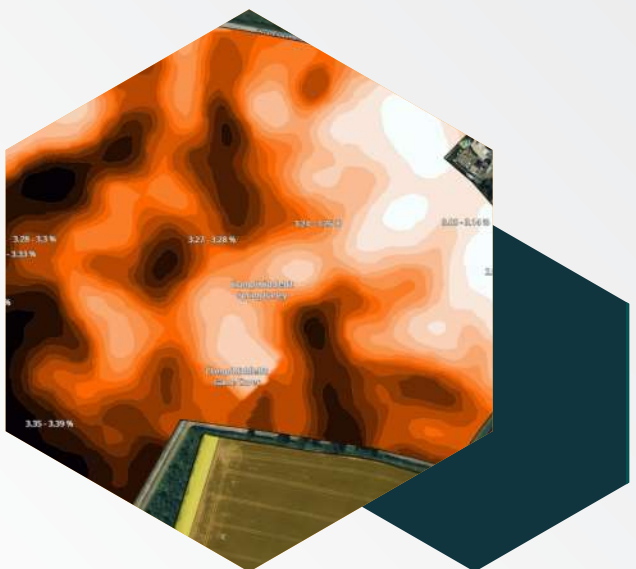

The flexible cloud-based software allows you to collect and layer data onto field maps to provide insights to the field's performance and improve your productivity, profitability and sustainability.

Omnia is the most versatile platform on the market:

- Unique tools including financial and carbon cost of production, stewardship and SFI management and business planning
- Record live field operations
- Manage stocks in real-time
- Create spray plans which are audited by Farmacy HALO crop protection database
- Compatible with the most popular machines and platforms

Store all the information you need in one place and easily capture knowledge on the go.

OUR LEADING SERVICES

High definition soil mapping

TerraMap is a digital soil scanning system that measures and maps most soil properties and soil texture changes within the field. TerraMap produces the world's highest resolution mapping layers at over 800 data points per hectare.

- Allows you and your agronomist to understand your soil and make the most of digital farming
- Use the results to produce variable rate application plans for seed and nutrition

Make your soil work for you

Understanding your soil and having good soil management practices can help you to optimise crop nutrition and productivity.

Link with Omnia to map soil management and health over time.

We have a Healthy Soils service to suit your every need including:

- Detailed soil analysis
- Measurement of soil nutrient reserves
- Plant tissue and sap analysis
- Harvested crop analysis
- Inter-row crop evaluation
- Water analysis
- Bespoke consultancy advice

SOIL HEALTH STRATEGY

OUR LEADING SERVICES

Support with the application and management of agri-environment schemes.

- Countryside Stewardship (CS)
- The Sustainable Farming Incentive (SFI)
- Capital grant schemes
- Seed mix advice
- Bespoke on-farm projects

Innovative analysis to implement change and increase profitability.

- Gross margins and rotation planning
- Fixed cost review
- Business health check
- Farm management
- Diversification

Helping you to produce crops in partnership with nature.

- Minimal, targeted inputs
- Uplift in biodiversity

Manage your environmental areas, agroecology practices, soil plans and financial performance easily through Omnia.

LAB SERVICES

Technical insights into your crop and soil performance with our lab analysis and specialist interpretation.

Our team of technical experts offer a range of analytical tests including:

- Potato Cyst Nematode (PCN) samples
- Loam analysis
- Manure and poultry manure analysis
- Plant tissue testing
- Water sample testing
- Soil assessment

SEED & NUTRITION ADVICE

SEED

Our seed specialists offer independent advice to help you get the correct species and varieties for your situation.

Link with our other services and agronomy advice to make an informed decision.

NUTRITION

Complete, integrated crop nutrition advice.

- Macro and micro nutrition including solids, liquids and renewables
- Full legislative and environmental compliance consultancy
- Variable rate plans, advice and technology integration through Omnia

Our advice is tailored to your requirements and takes environmental and practical considerations and your wider business objectives into account.

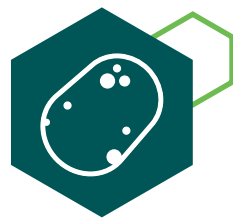

TECHNICAL TRIALS

Technical backup at our nationwide trials

Our in-field technical trials allow you to observe demonstrations in conditions close to your own and directly benefit from the findings.

In addition to arable crop trials, we have specialist demonstrations in:

Potato

Brassica

Cover crops

Field vegetables
